

CARBON ENHANCED MBR's

William Conner P.E., DEE

Outline

- 💧 *Oily WW Treatment Challenges*
- 💧 *Treatment Options*
 - *Biological IWWTP & GAC Columns*
 - *PACT WWTP*
 - *MBR & GAC Columns*
 - *PAC MBR (Carbon Enhanced MBR)*
- 💧 *Conclusion / Summary*

Problem

💧 Refinery / Oil Processing Wastewater

- High Temp (> 50 C) – Bio Difficult*
- High Chlorides (->1,000 mg/L)*
- V. High TDS Variability*
- High Ammonia/Phenol Concentrations*
- Frequent Flow interruptions*
- Refractory Organics*

💧 High Maintenance Sensitivity

💧 Water Conservation Important

Main Concern

- Refractory Organics -
Conventional WWTP – Not Feasible
Carbon Adsorption Required

Treatment Options

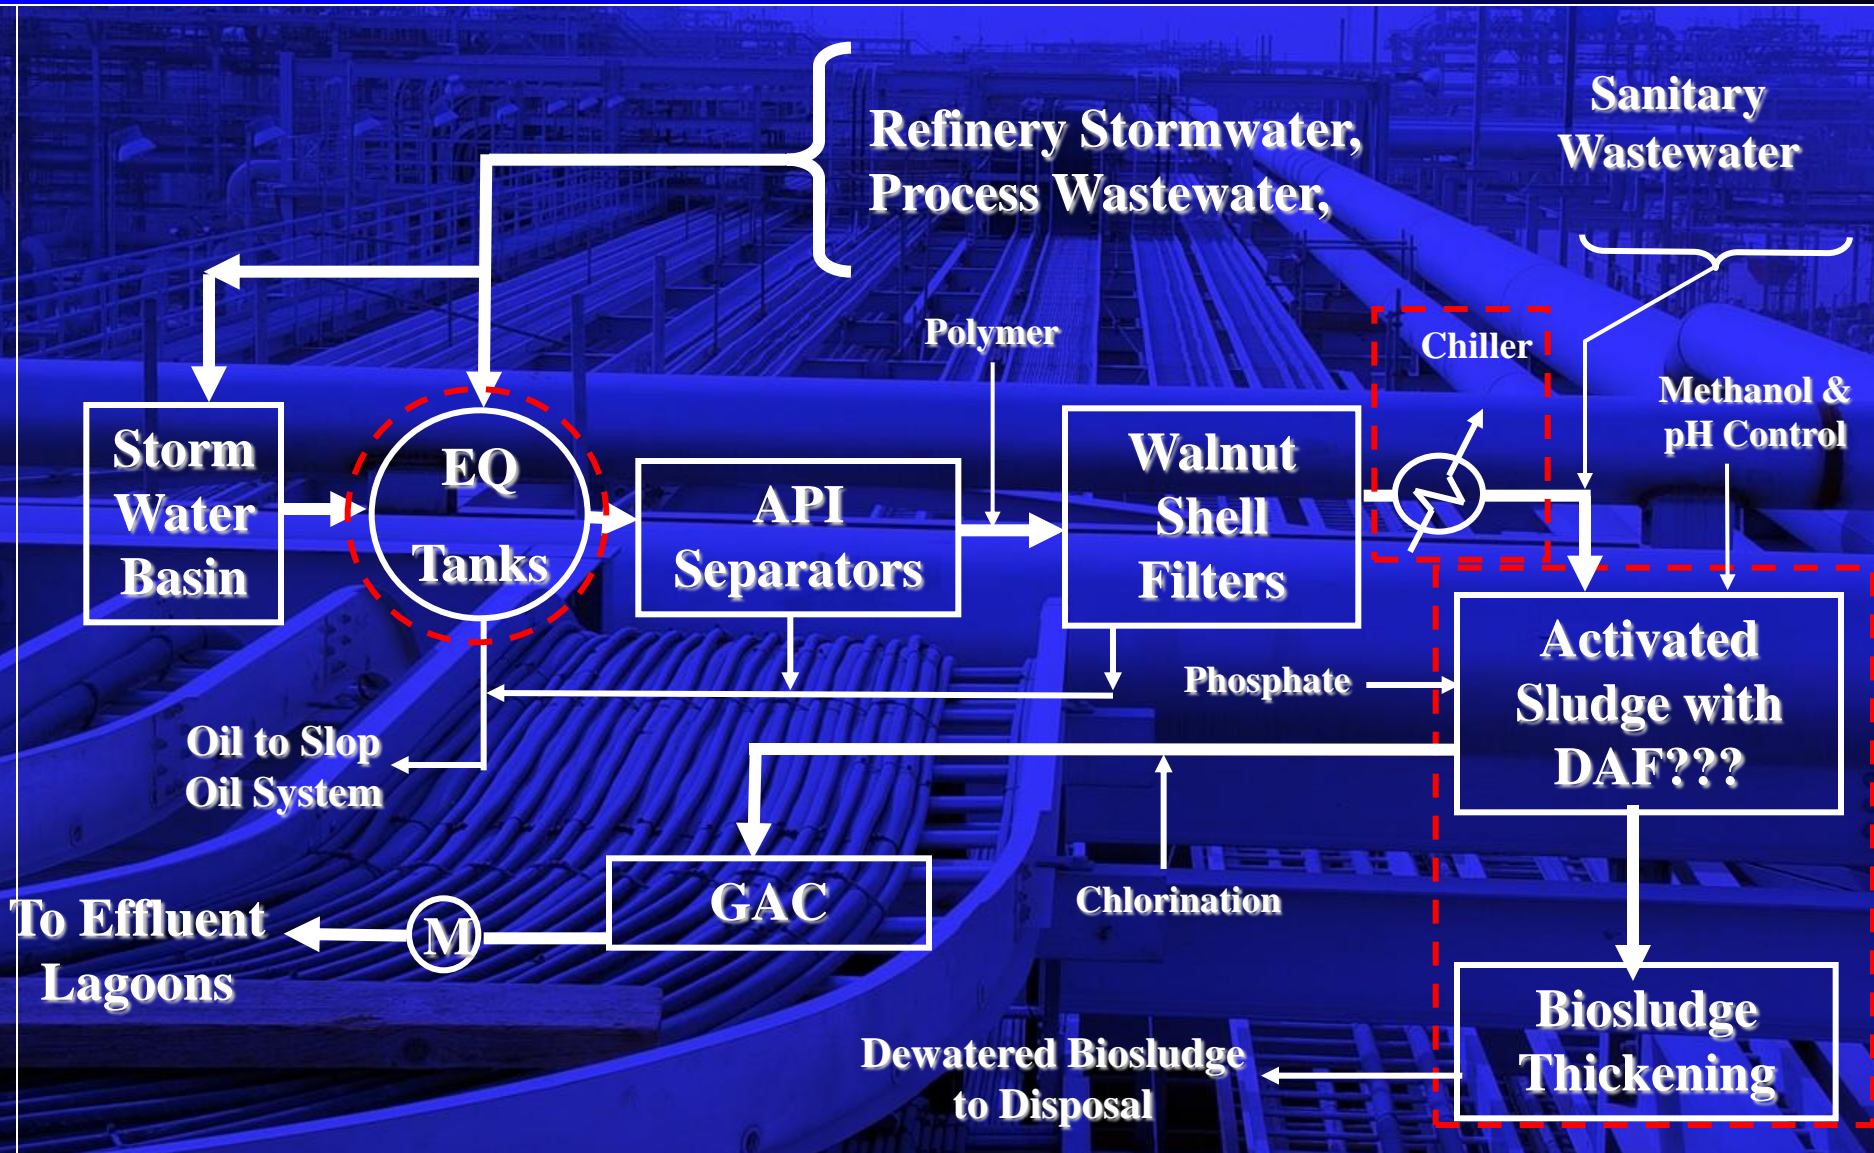

💧 Oil/Water Sep. & Conventional IWWTP

- *Conventional IWWTP & GAC Columns*
- *PACT IWWTP*

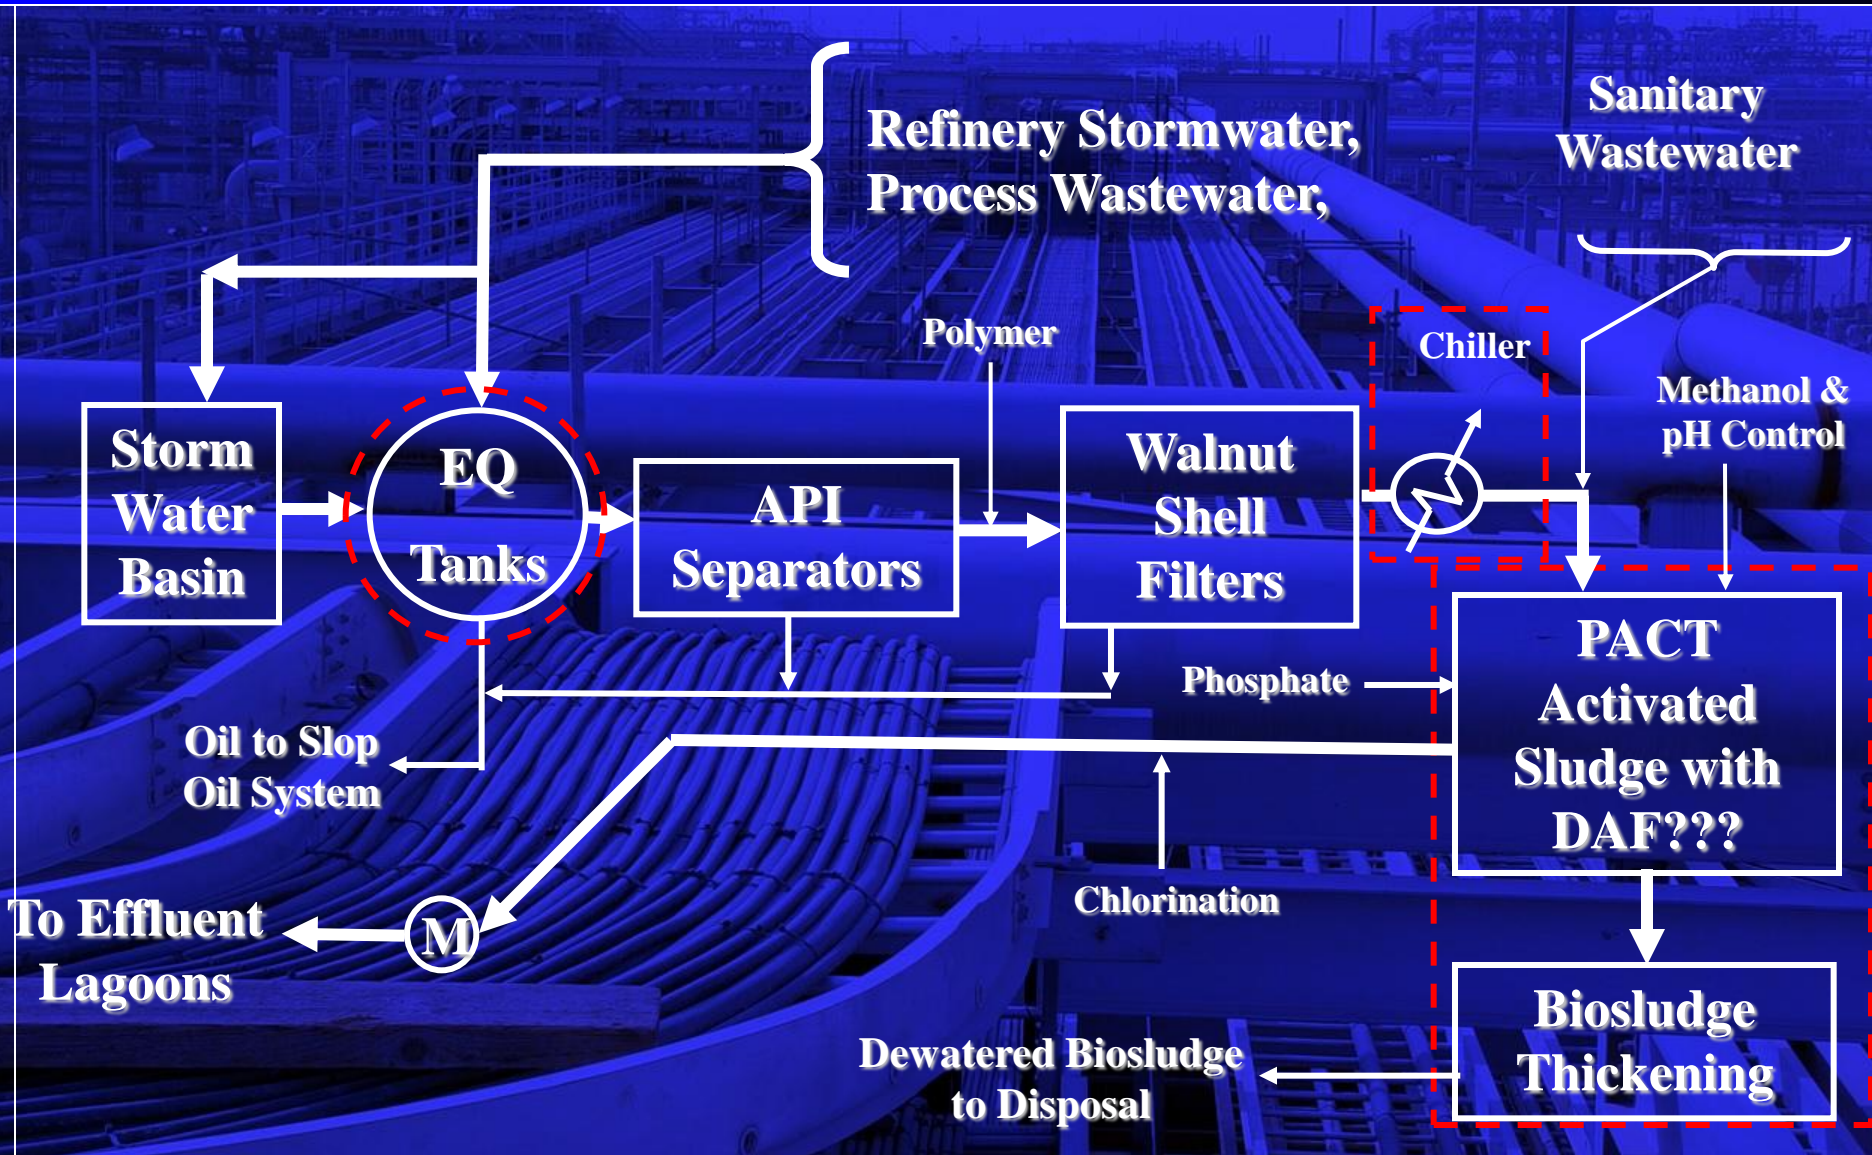

💧 Oil/Water Separation & MBR

- *MBR & GAC Columns*
- *PAC MBR (Carbon Enhanced)*

Conventional Biological Treatment & GAC Columns

PACT Biological Treatment

Conventional Biological Treatment Advantages / Disadvantages

Advantages

Most common system

Disadvantages

Biomass unstable – feed fluctuations = upsets

Solids won't settle in Clarifier

Can't meet effluent requirements w/o GAC

Ammonia may be toxic

Extensive plot area required to accommodate equipment – Space Limitations

MBR & GAC Process Design

MBR & GAC

Advantages / Disadvantages

Advantages

- No Clarifier = No Settling Problems***
- Smaller Footprint***
- More Stable Biomass***

Disadvantages

- Membrane Fouling***
- High Cost for GAC***

PAC MBR Process Design

*WW from
Primary
Treatment*

Marine Discharge

PAC MBR

PAC MBR (Carbon Enhanced) Advantages / Disadvantages

Advantages

- No Clarifier = No Settling Problems***
- Smaller Footprint***
- More Stable Biomass***
- Lower Cost for Carbon***
- No Fouling***
- Reuse Possible***

Disadvantages

- Membrane Abrasion***

PAC MBR COD Removal

Refinery WW - COD Removal
PAC Petro™ MBR

▲ Feed COD ● Effluent COD

MBR & PAC MBR Comparison

	<u>Feed</u>	<u>MBR</u> <u>Removal %</u>	<u>PAC MBR</u> <u>Removal %</u>
BOD	~400 mg/L	(~4 mg/L) 99%	(~5 mg/L) 99%
COD	~750 mg/L	(151 mg/L) 81%	(46 mg/L) 92%
TOC	~200 mg/L	(27 mg/L) 86%	(11 mg/L) 94%

Effluent Comparison

Petro(tm)MBR Effluent

PAC Petro(tm)MBR Effluent

Refinery Wastewater Blend MBR Effluent

Membrane Comparison

PAC PetroMBR Module

PetroMBR Module

14 Dec 2006

MBR – PAC MBR RO Comparison

	MBR	PAC MBR
Silica - Total	1.1 mg/L	<0.2 mg/L
Turbidity	0.43 NTU	<0.18 NTU
Total Dissolved Solids	238 mg/L	27 mg/L

MBR & GAC vs. PAC MBR

<u>MBR & GAC</u>	<u>PAC MBR</u>
<i>High Op. Cost for GAC</i>	<i>Lower Op. Cost</i>
<i>Higher Capital Cost</i>	<i>Lower Capital Cost</i>
<i>Slow Acclimation</i>	<i>Immediate Acclimation</i>
<i>Susceptible to Upsets</i>	<i>Tolerant to Upsets</i>
<i>Frequent Cleaning</i>	<i>Less Frequent Cleaning</i>
<i>Poor Refractory Removal</i>	<i>Ex. Refractory Removal</i>
<i>Slow Drying Sludge</i>	<i>Better Dewatering Sludge</i>
<i>Effluent Fouled RO</i>	<i>RO Acceptable Effluent</i>
<i>Long Term Fouling??</i>	<i>Long Term Abrasion??</i>

Summary

💧 *Conventional IWWP*

- *Not Stable*

💧 *MBR & GAC Columns*

- *Stable Operation*
- *Fouling Problems*

💧 *PAC MBR*

- *Stable Operation*
- *No Fouling Problems*
- *Economical – Lower Cap & Op. Expenses*
- *Abrasion*

Thank You
