

Membrane Separations

Spiral-wound module.

Membrane Separations

- Configuration:

- Tubular.

- It is like a tube.

- Usually the active layer is inside.

- The permeate crosses the membrane layer to the outside (this is, the feed flows inside).

- Low surface area/volume ratio.

- Several lengths and diameter (>10 mm).

- Modules grouping one or various membranes.

Membrane Separations

Different types of tubular modules.
