# **Clarifier Loading Calculations**

Weir Overflow Rate (WOR) = 
$$\frac{Flow, gallons/day}{Length of Weir, ft}$$

# **But First**

# Area and Volume Calculations

Rectangles

Surface Area,  $ft^2$  = Length, ft X Width, ft

Example 1:

If a tank is 10 ft long and 5 ft wide, what is the surface area?

SA, 
$$ft^2 = 10 \text{ ft } X \text{ 5 ft } = \boxed{50 \text{ ft}^2}$$

Rectangles

Surface Area, ft<sup>2</sup> = Length, ft X Width, ft

**Example 2:** 

If a tank is 10 ft 6 inches long and 5 ft 9 inches wide, what is the surface area in sq. ft.?

NOT

 $SA, ft^2 = 10.6 ft X 5.9 ft$ 

# **Converting Inches to Feet**

$$6 \text{ inches} = \frac{6 \text{ inches}}{12 \text{ in/ft}} = 0.5 \text{ ft}$$

So: 10 ft 6 inches = 10.5 ft

9 inches = 
$$\frac{9 \text{ inches}}{12 \text{ in/ft}}$$
 = 0.75 ft

So: 5 ft 9 inches = 5.75 ft

# Rectangles

Surface Area, ft<sup>2</sup> = Length, ft X Width, ft

**Example 2:** 

If a tank is 10 ft 6 inches long and 5 ft 9 inches wide, what is the surface area in sq. ft.?

SA, 
$$ft^2 = 10.5 \text{ ft } X = 5.75 \text{ ft } = 60.4 \text{ ft}^2$$

# Rectangles

# Surface Area, $ft^2$ = Length, ft X Width, ft

# Work Calculations on Separate Paper Answers Given on Next Slides

### **Practice 1:**

If a clarifier is 25 ft long and 9 ft wide, what is the surface area in sq. ft.?

### **Practice 2:**

If a clarifier is 22 ft 3 inches long and 7 ft 7 inches wide, what is the surface <u>area</u> in <u>sq. ft.</u>?

Rectangles

Surface Area, ft<sup>2</sup> = Length, ft X Width, ft

### **Practice 1:**

If a clarifier is 25 ft long and 9 ft wide, what is the surface <u>area</u> in <u>sq. ft.</u>?

SA, 
$$ft^2 = 25 \text{ ft } X 9 \text{ ft } = 225 \text{ ft}^2$$

# Rectangles

Surface Area, ft<sup>2</sup> = Length, ft X Width, ft

### **Practice 2:**

If a clarifier is 22 ft 3 inches long and 7 ft 7 inches wide, what is the surface <u>area</u> in <u>sq. ft.</u>?

# **Converting Inches to Feet**

$$3 \text{ inches} = \frac{3 \text{ inches}}{12 \text{ in/ft}} = 0.25 \text{ ft}$$

So: 22 ft 6 inches = 22.25 ft

7 inches = 
$$\frac{7 \text{ inches}}{12 \text{ in/ft}}$$
 = 0.58 ft

So: 7 ft 7 inches = 7.58 ft

# Rectangles

Surface Area, ft<sup>2</sup> = Length, ft X Width, ft

### **Practice 2:**

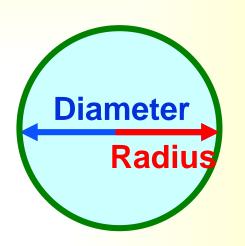

If a clarifier is 22 ft 3 inches long and 7 ft 7 inches wide, what is the surface area in sq. ft.?

SA, 
$$ft^2 = 22.25 \text{ ft } X 7.58 \text{ ft } = 60.4 \text{ ft}^2$$

Circles

# **Diameter:**

The distance across a circle, going through the center.

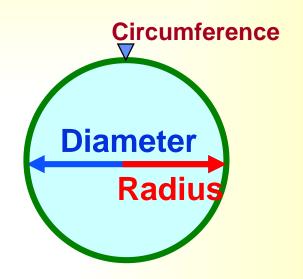

# Radius:

The distance from the center a circle to the perimeter.

Circles

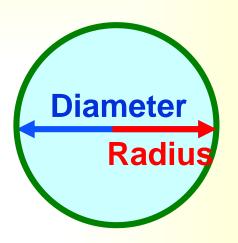

Circumference = distance around circle

Circles

pie

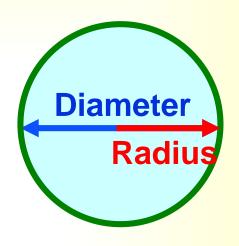

# Circles

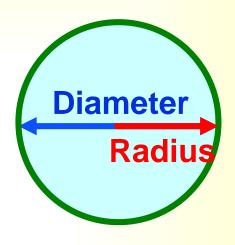

$$pi = \pi$$

Circles

Surface Area =  $\pi$  r<sup>2</sup>

= 3.14 X radius X radius

Circles

Surface Area = 
$$\pi r^2$$
 = 3.14 X  $r^2$ 

<u>OR</u>

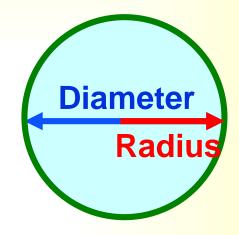

A = 3.14 X (D/2)<sup>2</sup> = 3.14 X 
$$\frac{D^2}{2^2}$$
 =  $\frac{3.14 \times D^2}{4}$ 

$$A = \frac{3.14}{4} \times D^2 = 0.785 \times D^2$$

Any on the Three Formulas Can Be Used

# Circles

# Surface Area = $\pi r^2$

### Example 1:

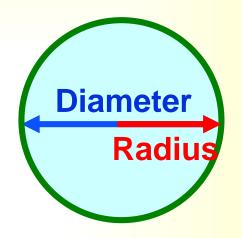

If a tank has a radius of 15 feet, what is the surface area?

$$SA = \pi r^2 = 3.14 \times 15 \text{ ft.} \times 15 \text{ ft.}$$

$$= 707 \text{ ft}^2$$

# Circles

Surface Area =  $\pi$  r<sup>2</sup>

### Example 2:

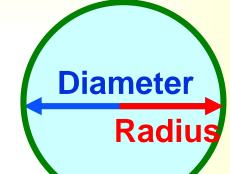

If a tank has a diameter of 25 feet, what is the surface area?

$$SA = \pi r^2 = 3.14 \times 12.5 \text{ ft.} \times 12.5 \text{ ft.}$$

$$= 491 \text{ ft}^2$$

Circles

Surface Area =  $\pi$  r<sup>2</sup>

Work Calculations on Separate Paper Answers Given on Next Slides

### Practice 1:

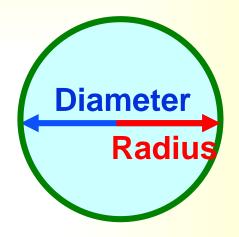

If a tank has a diameter of 50.5 feet, what is the surface area?

### **Practice 2:**

If a tank has a diameter of 50 feet 7 inches, what is the surface area?

# Circles

Surface Area =  $\pi r^2$ 

### **Practice 1:**

If a tank has a diameter of 50.5 feet, what is the surface area?

$$SA = \pi r^2 = 3.14 \times 25.25 \text{ ft.} \times 25.25 \text{ ft.}$$

 $= 2002 \text{ ft}^2$ 

**Diameter** 

Radius

# Circles

# Surface Area = $\pi$ r<sup>2</sup>

**Practice 2:** 

If a tank has a diameter of 50 feet 7 inches, what is the surface area?

7 inches = 
$$\frac{7 \text{ inches}}{12 \text{ in/ft}}$$
 = 0.58 ft

50 feet 8 inches = 50.58 ft

Radius =  $50.58 \text{ ft} \div 2 = 25.29 \text{ ft}$ 

**Diameter** 

Radius

Circles

Surface Area =  $\pi$  r<sup>2</sup>

**Practice 2:** 

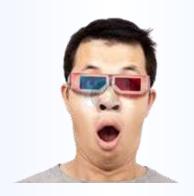

If a tank has a diameter of 50 feet 7 inches, what is the surface area?

 $SA = \pi r^2 = 3.14 \times 25.29 \text{ ft.} \times 25.29 \text{ ft.}$ 

 $= 2008 \text{ ft}^2$ 

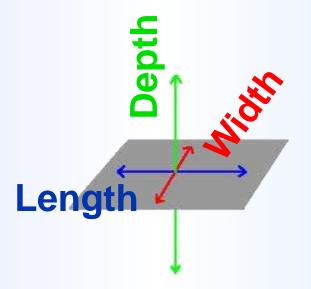

### **Volume – Three D**

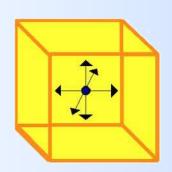

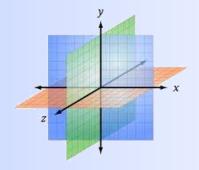

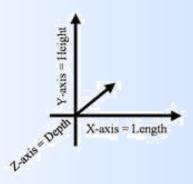

### **Volume – Three Dimensions**

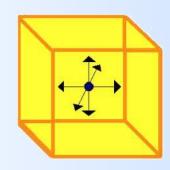

**Rectangular Tanks** 

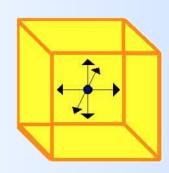

**Volume = Length X Width X Height (or Depth)** 

# **Example 1:**

If a tank is 10 feet long, 5 feet wide, and 5 feet deep, what is the volume in cubic feet?

Vol. =  $10 \text{ ft } X 5 \text{ ft } X 5 \text{ ft } = 250 \text{ ft}^3$ 

# **Rectangular Tanks**

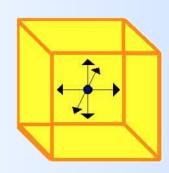

**Volume = Length X Width X Height (or Depth)** 

# **Example 2:**

If a tank is 20 ft. long, 7 ft. wide, and 5.5 ft. deep, what is the volume in cubic feet?

Vol. = 20 ft X 7 ft X 5.5 ft =  $770 \text{ ft}^3$ 

# **Rectangular Tanks**

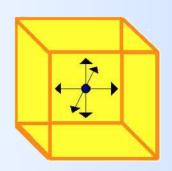

**Volume = Length X Width X Height (or Depth)** 

# **Example 3:**

If a tank is 25 ft. long, 9 ft. 3 inches wide, and 7.5 ft. deep, what is the volume in gallons?

Vol. = 25 ft X 9.25 ft X 7.5 ft =  $1734 \text{ ft}^3$ 

**Rectangular Tanks** 

**Volume = Length X Width X Height (or Depth)** 

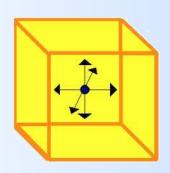

# **Example 3:**

If a tank is 25 ft. long, 9 ft. 3 inches wide, and 7.5 ft. deep, what is the volume in gallons?

There are 7.48 gallons in one cubic foot

OR 7.48 gal/ft<sup>3</sup>

# **Rectangular Tanks**

**Volume = Length X Width X Height (or Depth)** 

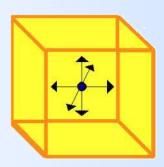

# **Example 3:**

If a tank is 25 ft. long, 9 ft. 3 inches wide, and 7.5 ft. deep, what is the volume in gallons?

Vol. = 25 ft X 9.25 ft X 7.5 ft = 1734 ft<sup>3</sup>  $1734 \text{ ft}^3 \text{ X } 7.48 \text{ gal/ft}^3 = 12,970 \text{ gallons}$ 

# **Rectangular Tanks**

# Work Calculations on Separate Paper Answers Given on Next Slides

### **Practice 1:**

If a tank is 21 feet long, 9 feet wide, and 7 feet deep, what is the volume in cubic feet?

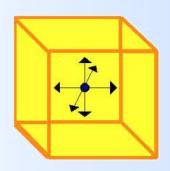

### **Practice 2:**

If a tank is 22 ft. long, 9 ft. wide, and 7.5 ft. deep, what is the volume in cubic feet?

### **Practice 3:**

If a tank is 35 ft. long, 12 ft. 3 inches wide, and 9.5 ft. deep, what is the volume in gallons?

# **Rectangular Tanks**

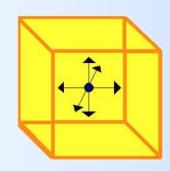

**Volume = Length X Width X Height (or Depth)** 

### **Practice 1:**

If a tank is 21 feet long, 9 feet wide, and 7 feet deep, what is the volume in cubic feet?

Vol. = 21 ft X 9 ft X 7 ft =  $1323 \text{ ft}^3$ 

# **Rectangular Tanks**

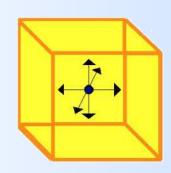

**Volume = Length X Width X Height (or Depth)** 

### **Practice 2:**

If a tank is 22 ft. long, 9 ft. wide, and 7.5 ft. deep, what is the volume in cubic feet?

Vol. = 22 ft X 9 ft X 7.5 ft =  $1485 \text{ ft}^3$ 

#### **Rectangular Tanks**

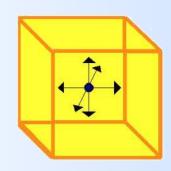

**Volume = Length X Width X Height (or Depth)** 

#### **Practice 3:**

If a tank is 35 ft. long, 12 ft. 3 inches wide, and 9.5 ft. deep, what is the volume in gallons?

Vol. =  $35 \text{ ft } X 12.25 \text{ ft } X 9.5 \text{ ft } = 4073 \text{ ft}^3$ 

**Rectangular Tanks** 

**Volume = Length X Width X Height (or Depth)** 

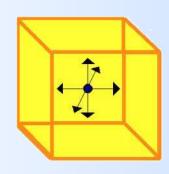

#### **Practice 3:**

If a tank is 35 ft. long, 12 ft. 3 inches wide, and 9.5 ft. deep, what is the volume in gallons?

There are 7.48 gallons in one cubic foot

OR 7.48 gal/ft<sup>3</sup>

#### **Rectangular Tanks**

**Volume = Length X Width X Height (or Depth)** 

#### **Practice 3:**

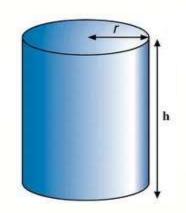

If a tank is 35 ft. long, 12 ft. 3 inches wide, and 9.5 ft. deep, what is the volume in gallons?

Vol. =  $35 \text{ ft } X 12.25 \text{ ft } X 9.5 \text{ ft } = 4073 \text{ ft}^3$ 

 $4073 \text{ ft}^3 \times 7.48 \text{ gal/ft}^3 = 30,466 \text{ gallons}$ 

Round (Cylinder) Tanks

**Volume – Three Dimensions** 

$$V = \pi r^2 h$$

$$\pi = 3.14$$

r = Radius of circle

h = Height (or Depth)

#### Round (Cylinder) Tanks

#### **Example 1**

Find the Volume in cubic feet of a tank having a radius of 10 feet and a depth of 8 feet.

$$V = \pi r^{2}h = 3.14 \times 10 \text{ ft } \times 10 \text{ ft } \times 8 \text{ ft}$$
$$= 3.14 \times 800 \text{ ft}^{3}$$
$$= 2512 \text{ ft}^{3}$$

#### Round (Cylinder) Tanks

#### Example 2

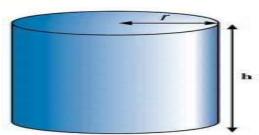

Find the Volume in cubic feet of a tank having a diameter of 30 feet and a depth of 8 feet.

$$V = \pi r^{2}h = 3.14 \times 15 \text{ ft } \times 15 \text{ ft } \times 8 \text{ ft}$$
$$= 3.14 \times 1800 \text{ ft}^{3}$$
$$= 5652 \text{ ft}^{3}$$

Round (Cylinder) Tanks

#### Example 3

Find the Volume in gallons of a tank having a diameter of 50 feet and a depth of 9 feet.

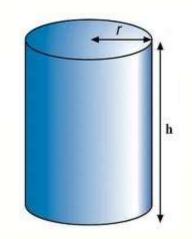

$$V = \pi r^2 h = 3.14 \times 25 \text{ ft } \times 25 \text{ ft } \times 9 \text{ ft}$$

 $= 17,662.5 \text{ ft}^3$ 

X 7.48 gal/ft<sup>3</sup>

= 132,116 gallons

# Round (Cylinder) Tanks Volume – Three Dimensions

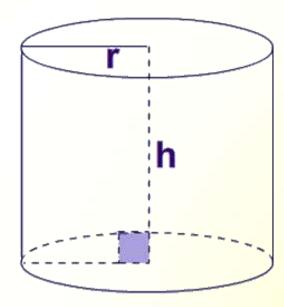

$$\pi = 3.14$$

r = Radius of circle

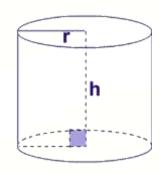

h = Height (or Depth)

$$V = \pi r^2 h$$

#### Round (Cylinder) Tanks

$$V = \pi r^2 h$$

#### Work Calculations on Separate Paper Answers Given on Next Slides

#### **Practice 1**

Find the Volume in cubic feet of a tank having a radius of 22 feet and a depth of 10 feet.

#### **Practice 2**

Find the Volume in cubic feet of a tank having a diameter of 28 feet and a depth of 7.5 feet.

#### **Practice 3**

Find the Volume in gallons of a tank having a diameter of 48 feet and a depth of 7 feet.

#### Round (Cylinder) Tanks

#### **Practice 1**

Find the Volume in cubic feet of a tank having a radius of 22 feet and a depth of 10 feet.

$$V = \pi r^{2}h = 3.14 \times 22 \text{ ft } \times 22 \text{ ft } \times 10 \text{ ft}$$
$$= 3.14 \times 4840 \text{ ft}^{3}$$
$$= 15,198 \text{ ft}^{3}$$

#### Round (Cylinder) Tanks

#### **Practice 2**

Find the Volume in cubic feet of a tank having a diameter of 28 feet and a depth of 7.5 feet.

$$V = \pi r^2 h = 3.14 \times 14 \text{ ft } \times 14 \text{ ft } \times 7.5 \text{ ft}$$
  
= 3.14 \times 1470 \text{ ft}^3

 $= 4616 \text{ ft}^3$ 

Round (Cylinder) Tanks

#### **Practice 3**

Find the Volume in gallons of a tank having a diameter of 48 feet and a depth of 7 feet.

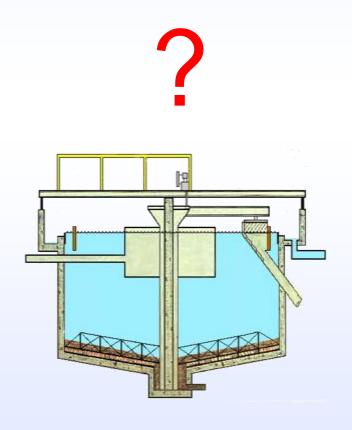

$$V = \pi r^2 h = 3.14 \times 24 \text{ ft } \times 24 \text{ ft } \times 7 \text{ ft}$$

 $= 12,660 \text{ ft}^3$ 

X 7.48 gal/ft<sup>3</sup>

= 94,700 gallons

# What about a Round Tank with a Cone Bottom

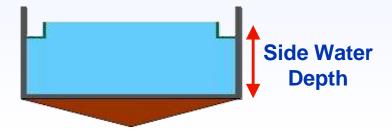

#### **Cylinder with Cone Bottom**

$$V_{cylinder} = \pi r^2 h_1$$

$$V_{cone} = 1/3 \pi r^2 h \text{ or } \frac{\pi r^2 h_2}{3}$$

$$V_{\text{total}} = V_{\text{cylinder}} + V_{\text{cone}}$$

#### **Cylinder with Cone Bottom**

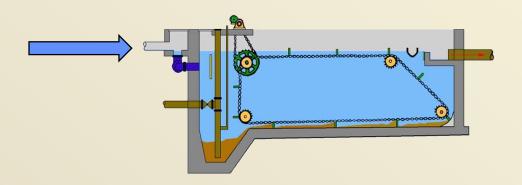

# For Secondary Clarifiers Volume of Cone Not Considered

Insignificant Compared to Total Volume (Filled with Sludge)

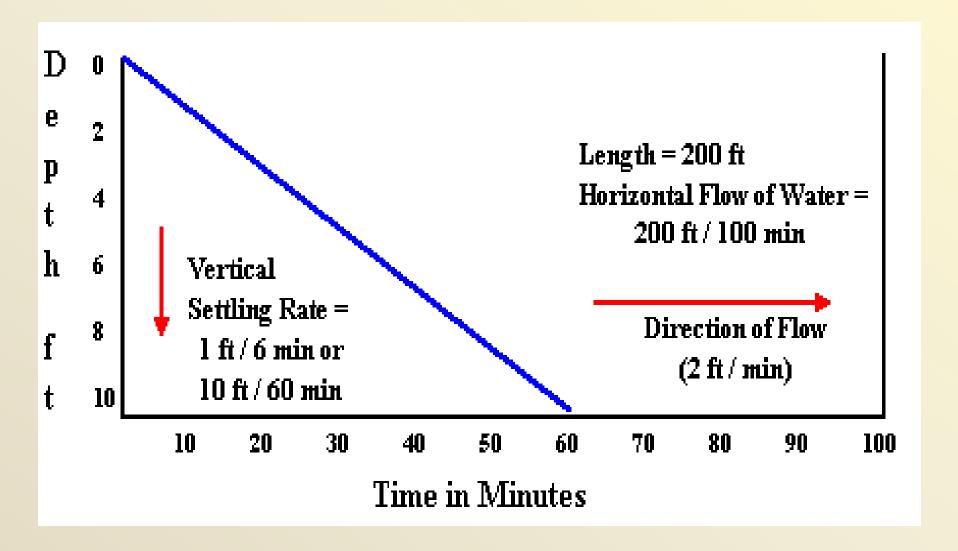

## **Hydraulic Loading**

#### **Detention Time (DT)**

The time it takes for a drop of water to travel from inlet to outlet

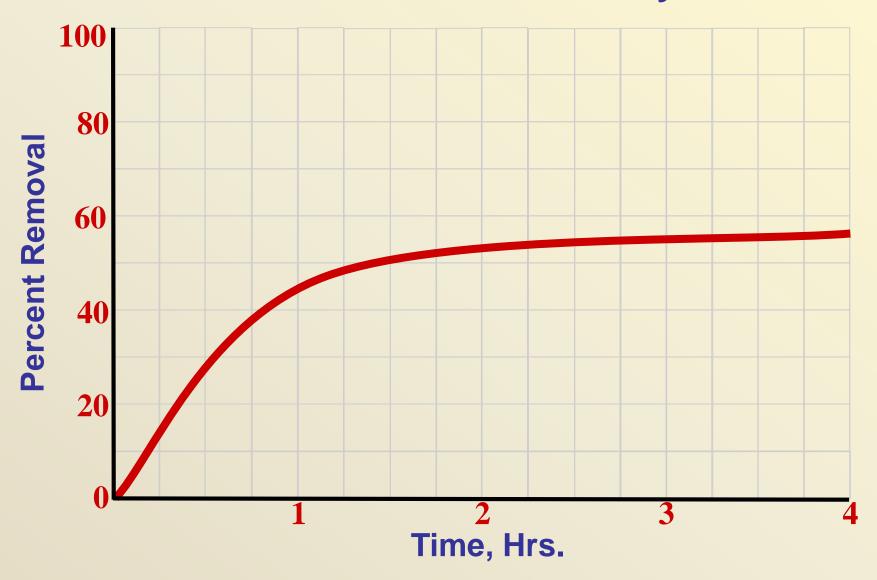

#### **Clarifier Detention Time**

Must Have Detention Time Long Enough for Solids to Settle

#### **Sedimentation Efficiency**

Too Long - No Increase in Removal

**Hydraulic Loading** 

**Detention Time (DT)** 

The time it takes for a drop of water to travel from inlet to outlet

Typical Design Value = 2 – 3 Hours

# Hydraulic Loading

# **Detention Time =** $\frac{\text{Tank Volume}}{\text{Influent Rate}}$

#### Example 1a:

Calculate the Detention Time in for a clarifier with a volume of 25,000 gallons that receives a flow of 310,000 gal/day.

Detention Time = 
$$\frac{\text{Volume}}{\text{Flow}}$$

$$= \frac{25,000 \text{ gallons}}{310,000 \text{ gallons}} = 0.08 \text{ Days}$$

# Hydraulic Loading

**Detention Time =** | Tank Volume | Influent Rate

#### Example 1b:

Calculate the Detention Time in <u>HOURS</u> for a clarifier with a volume of 25,000 gallons that receives a flow of 310,000 gal/day.

Detention Time = Volume Flow

 $=\frac{25,000 \text{ gallons}}{310,000 \text{ gallons/day}} = 0.08 \text{ Days}$ 

0.08 Days X 24 hours/days = 1.9 Hours

**Hydraulic Loading** 

**Detention Time (DT)** 

The time it takes for a drop of water to travel from inlet to outlet

**Detention Time** =  $\frac{\text{Tank Volume}}{\text{Flow into Tank}}$ 

**Hydraulic Loading** 

**Detention Time (DT)** 

The time it takes for a drop of water to travel from inlet to outlet

DT, hrs = Tank Volume, (MG or Gallons) X 24
Flow into Tank, (MG/D or Gal/D)

Example 1. Find the detention time in hours of a circular sedimentation tank having a volume of 75,000 gallons and a flow of 900,000 gallons per day.

DT, hrs = 
$$\frac{75,000 \text{ gallons } X \text{ 24 hr/day}}{900,000 \text{ gallons/day}}$$

**= 2 hour** 

Example 2. Find the detention time in hours of a circular sedimentation tank having a volume of 55,000 gallons and a flow of 0.75 MGD.

DT, hrs =  $\frac{\text{Tank Volume, gallons X 24 hr/day}}{\text{Flow into Tank, gallons/day}}$ 

0.75 MGD = 750,000 gal/day

Example 2. Find the detention time in hours of a circular sedimentation tank having a volume of 55,000 gallons and a flow of 0.75 MGD.

DT, hrs =  $\frac{\text{Tank Volume, gallons X 24 hr/day}}{\text{Flow into Tank, gallons/day}}$ 

DT, hrs = 
$$\frac{55,000 \text{ gallons } \times 24 \text{ hr/day}}{750,000 \text{ gallons/day}}$$

= 1.8 hour

#### Work Calculations on Separate Paper Answers Given on Next Slides

Practice 1. Find the detention time in hours of a clarifier having a volume of 52,000 gallons and a flow of 520,000 gallons per day.

Practice 2. Find the detention time in hours of a rectangular sedimentation tank having a volume of 16,400 gallons and a flow of 0.225 MGD.

Practice 1. Find the detention time in hours of a clarifier having a volume of 52,000 gallons and a flow of 520,000 gallons per day.

DT, hrs = Tank Volume, gallons X 24 hr/day
Flow into Tank, gallons/day

DT, hrs = 
$$\frac{52,000 \text{ gallons } X \text{ 24 hr/day}}{520,000 \text{ gallons/day}}$$

= 2.4 hour

Practice 2. Find the detention time in hours of a rectangular sedimentation tank having a volume of 16,400 gallons and a flow of 0.225 MGD.

DT, hrs =  $\frac{\text{Tank Volume, gallons X 24 hr/day}}{\text{Flow into Tank, gallons/day}}$ 

0.225 MGD = 220,000 gal/day

Practice 2. Find the detention time in hours of a rectangular sedimentation tank having a volume of 16,400 gallons and a flow of 0.225 MGD.

DT, hrs =  $\frac{\text{Tank Volume, gallons X 24 hr/day}}{\text{Flow into Tank, gallons/day}}$ 

DT, hrs = 
$$\frac{16,400 \text{ gallons } X \text{ 24 hr/day}}{225,000 \text{ gallons/day}}$$

= 1.75 hour

**Hydraulic Loading** 

**Detention Time (DT)** 

The time it takes for a drop of water to travel from inlet to outlet

**Detention Time** = Tank Volume Flow into Tank

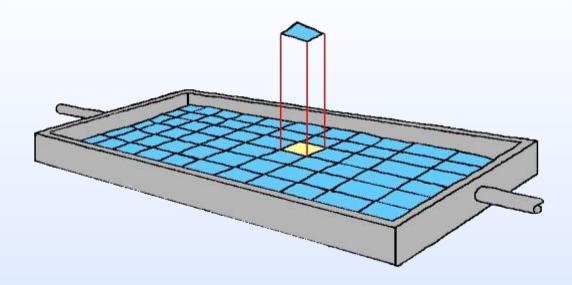

DT, hrs = <u>Tank Volume, (MG or Gallons) X 24</u> Flow into Tank, (MG/D or Gal/D)

Typical Design Value = 2 – 3 Hours

**Hydraulic Loading** 

Surface Overflow Rate (SOR)
OR
Surface Loading Rate (SLR)

The flow in gallons per day into the clarifier per square foot of surface area

Hydraulic Loading

Surface Overflow Rate (SOR)

OR

Surface Loading Rate (SLR)

The flow in gallons per day into the clarifier per square foot of surface area

SOR, gpd/ft<sup>2</sup> = Flow, gallons/day Surface Area, ft<sup>2</sup>

## **Hydraulic Loading**

**Surface Overflow Rate (SOR)** 

SOR,  $gpd/ft^2 = ($ 

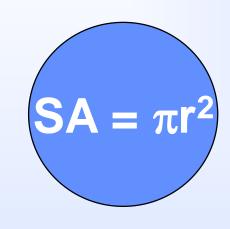

Flow, gallons/day Surface Area, ft<sup>2</sup>

Need:

Flow in gallons/day and

Surface Area, ft<sup>2</sup>

SA = LXW

**Hydraulic Loading** 

**Surface Overflow Rate (SOR)** 

SOR, gpd/ft<sup>2</sup> = Flow, gallons/day Surface Area, ft<sup>2</sup>

Typical Design Value = 400 - 800 gal/day/ft<sup>2</sup>

#### Hydraulic Loading - Surface Overflow Rate (SOR)

#### Example 1.

Calculate the Surface Overflow Rate for a clarifier that is 50 ft long, 15 ft wide, 12 ft deep, and receives a flow of 338,000 gallons per day.

SOR, gpd/ft<sup>2</sup> = 
$$\frac{\text{Flow, gallons/day}}{\text{Surface Area, ft}^2}$$

Surface Area,  $ft^2 = 50$  ft X 15 ft = 750 ft<sup>2</sup>

SOR, gpd/ft<sup>2</sup> = 
$$\frac{338,000 \text{ gallons per day}}{750 \text{ ft}^2}$$

= 451 gpd/ft<sup>2</sup>

### Hydraulic Loading - Surface Overflow Rate (SOR)

#### Example 2.

Calculate the Surface Overflow Rate for a clarifier that has a diameter of 60 ft, and receives an influent flow of 1.65 MGD.

SOR, 
$$gpd/ft^2 = \frac{Flow, gallons/day}{Surface Area, ft^2}$$

Flow, gallons/day = 1.65 MGD X 1,000,000

= 1,650,000 gallons per day

Surface Area,  $ft^2 = \pi r^2 = 3.14 \times 30 \text{ ft } \times 30 \text{ ft}$ 

 $= 2826 \text{ ft}^2$ 

### Hydraulic Loading - Surface Overflow Rate (SOR)

#### Example 2.

Calculate the Surface Overflow Rate for a clarifier that has a diameter of 60 ft, and receives an influent flow of 1.65 MGD.

SOR, 
$$gpd/ft^2 = \frac{Flow, gallons/day}{Surface Area, ft^2}$$

SOR, gpd/ft<sup>2</sup> = 
$$\frac{1,650,000 \text{ gallons per day}}{2826 \text{ ft}^2}$$

### Hydraulic Loading - Surface Overflow Rate (SOR)

### Work Calculations on Separate Paper Answers Given on Next Slides

#### Practice 1.

Calculate the Surface Overflow Rate for a clarifier that is 35 ft long, 9 ft wide, 7 ft deep, and receives a flow of 235,000 gallons per day.

#### Practice 2.

Calculate the Surface Overflow Rate for a clarifier that has a diameter of 45 ft. and receives an influent flow of 0.65 MGD.

### Hydraulic Loading - Surface Overflow Rate (SOR)

#### Practice 1.

Calculate the Surface Overflow Rate for a clarifier that is 35 ft long, 9 ft wide, 7 ft deep, and receives a flow of 235,000 gallons per day.

SOR, 
$$gpd/ft^2 = \frac{Flow, gallons/day}{Surface Area, ft^2}$$

Surface Area,  $ft^2 = 35$  ft X 9 ft = 315 ft<sup>2</sup>

SOR, gpd/ft<sup>2</sup> = 
$$\frac{235,000 \text{ gallons per day}}{315 \text{ ft}^2}$$

$$= 746 \text{ gpd/ft}^2$$

### Hydraulic Loading - Surface Overflow Rate (SOR)

#### Practice 2.

Calculate the Surface Overflow Rate for a clarifier that has a diameter of 45 ft. and receives an influent flow of 0.65 MGD.

SOR, 
$$gpd/ft^2 = \frac{Flow, gallons/day}{Surface Area, ft^2}$$

Flow, gallons/day = 0.65 MGD X 1,000,000

= 650,000 gallons per day

Surface Area,  $ft^2 = \pi r^2 = 3.14 \times 22.5 \text{ ft } \times 22.5 \text{ ft}$ 

 $= 1590 \text{ ft}^2$ 

### Hydraulic Loading - Surface Overflow Rate (SOR)

#### Practice 2.

Calculate the Surface Overflow Rate for a clarifier that has a diameter of 45 ft, and receives an influent flow of 0.65 MGD.

SOR, gpd/ft<sup>2</sup> = 
$$\frac{650,000 \text{ gallons per day}}{1590 \text{ ft}^2}$$

 $= 409 \text{ gpd/ft}^2$ 

**Hydraulic Loading** 

**Surface Overflow Rate (SOR)** 

SOR, gpd/ft<sup>2</sup> = Flow, gallons/day Surface Area, ft<sup>2</sup>

Typical Design Value = 300 - 1200 gal/day/ft<sup>2</sup> (800 gal/day/ft<sup>2</sup>)

Hydraulic Loading
Weir Overflow Rate (WOR)

The flow in gallons per day per linear foot of weir

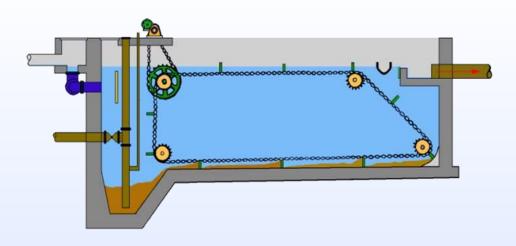

WOR, gal/d/ft = Flow, gallons/day Length of Weir, ft

Typical Design Value = ~10,000 gal/day/ft

**Hydraulic Loading - Weir Overflow Rate (WOR)** 

WOR, gal/d/ft = Flow, gallons/day Length of Weir, ft

Rectangular Tanks - Length of Weir, ft

**Hydraulic Loading - Weir Overflow Rate (WOR)** 

WOR, gal/d/ft = Flow, gallons/day Length of Weir, ft

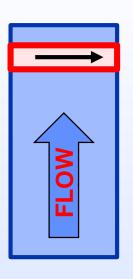

Rectangular Tanks - Length of Weir, ft

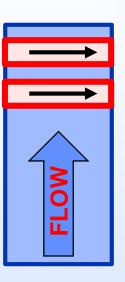

= Width

= 2 X Width

= 4 X Width

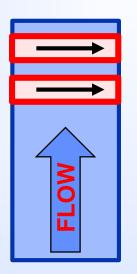

### **Hydraulic Loading - Weir Overflow Rate (WOR)**

#### **Example 1**

A primary clarifier is 20 feet wide, 60 feet long, and has a SWD of 12 feet. The clarifier has two effluent troughs across the width that allow the water to flow over both sides of each trough. The average flow to the clarifier is 0.65 MGD. Calculate the weir over flow rate for this clarifier.

WOR, gal/d/ft = 
$$\frac{\text{Flow, gallons/day}}{\text{Length of Weir, ft}}$$

Flow, gallons/day = 0.65 MGD X 1,000,000 = 650,000 gal/day

Length of Weir, ft = 4 X Width

 $= 4 \times 20 \text{ ft}$ 

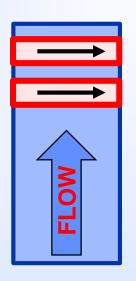

= 80 ft

### **Hydraulic Loading - Weir Overflow Rate (WOR)**

#### **Example 1**

A primary clarifier is 12 feet wide, 40 feet long, and has a SWD of 8 feet. The clarifier has two effluent troughs across the width that allow the water to flow over both sides of each trough. The average flow to the clarifier is 0.65 MGD. Calculate the weir over flow rate for this clarifier.

WOR, gal/d/ft = 
$$\frac{\text{Flow, gallons/day}}{\text{Length of Weir, ft}}$$

### **Hydraulic Loading - Weir Overflow Rate (WOR)**

WOR, gal/d/ft =  $\frac{\text{Flow, gallons/day}}{\text{Length of Weir, ft}}$ 

### Work Calculations on Separate Paper Answers Given on Next Slides

#### **Practice 1**

A primary clarifier is 18 feet wide, 45 feet long, and has a SWD of 9 feet. The clarifier has an effluent trough across the end. The average flow to the clarifier is 0.085 MGD. Calculate the weir over flow rate for this clarifier.

#### **Practice 2**

A primary clarifier is 12 foot wide, 40 foot long, and has a SWD of 8 feet. The clarifier has two effluent troughs across the width that allow the water to flow over both sides of each trough. The average flow to the clarifier is 0.41 MGD. Calculate the weir over flow rate for this clarifier.

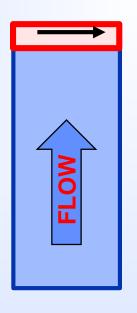

### **Hydraulic Loading - Weir Overflow Rate (WOR)**

#### **Practice 1**

A primary clarifier is 18 feet wide, 45 feet long, and has a SWD of 9 feet. The clarifier has an effluent trough across the end. The average flow to the clarifier is 0.085 MGD. Calculate the weir over flow rate for this clarifier.

WOR, gal/d/ft = 
$$\frac{\text{Flow, gallons/day}}{\text{Length of Weir, ft}}$$

Flow, gallons/day =  $0.085MGD \times 1,000,000 = 85,000 \text{ gal/day}$ 

Length of Weir, ft = Width

WOR, gal/d/ft = 
$$\frac{85,000 \text{ gal/day}}{9 \text{ ft}}$$

= 9,444 gal/day/ft

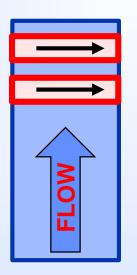

### **Hydraulic Loading - Weir Overflow Rate (WOR)**

#### **Practice 2**

A primary clarifier is 12 foot wide, 40 foot long, and has a SWD of 8 feet. The clarifier has two effluent troughs across the width that allow the water to flow over both sides of each trough. The average flow to the clarifier is 0.41 MGD. Calculate the weir over flow rate for this clarifier.

WOR, gal/d/ft = 
$$\frac{\text{Flow, gallons/day}}{\text{Length of Weir, ft}}$$

Flow, gallons/day = 0.41 MGD X 1,000,000 = 410,000 gal/day

Length of Weir, ft = 4 X Width

= 4 X 12 ft

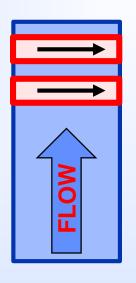

=48 ft

### **Hydraulic Loading - Weir Overflow Rate (WOR)**

#### **Practice 2**

A primary clarifier is 12 foot wide, 40 foot long, and has a SWD of 8 feet. The clarifier has two effluent troughs across the width that allow the water to flow over both sides of each trough. The average flow to the clarifier is 0.41 MGD. Calculate the weir over flow rate for this clarifier.

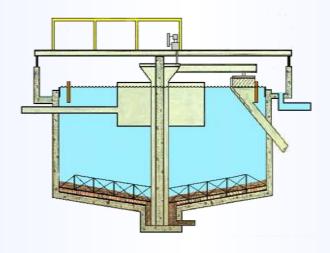

WOR, gal/d/ft = 
$$\frac{\text{Flow, gallons/day}}{\text{Length of Weir, ft}}$$

**Hydraulic Loading - Weir Overflow Rate (WOR)** 

WOR, gal/d/ft = Flow, gallons/day Length of Weir, ft

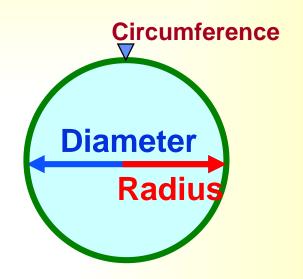

Weir Length for a Circular Clarifier?

### **Surface Area Calculations**

Circles

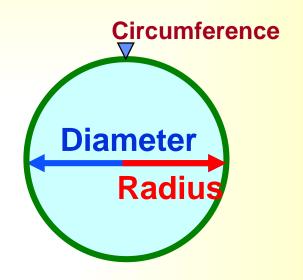

Circumference = distance around circle

### **Surface Area Calculations**

Circles

Circumference = distance around circle

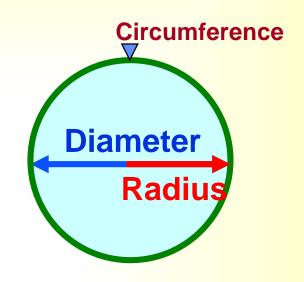

$$\frac{\text{Circumference}}{\text{Diameter}} = \frac{C}{D} = \pi = 3.14 \text{ for any circle}$$

$$C = \pi D$$

### **Surface Area Calculations**

Circles

Circumference = distance around circle

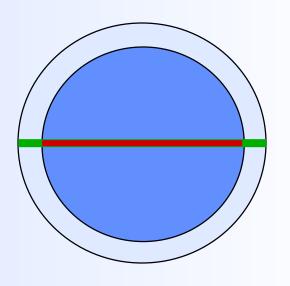

For Weir Length
D = Diameter of the Weir
(May Not be same as Tank)

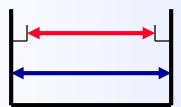

$$C = \pi D$$

**Hydraulic Loading - Weir Overflow Rate (WOR)** 

WOR, gal/d/ft = Flow, gallons/day Length of Weir, ft

Weir Length for a Circular Clarifier

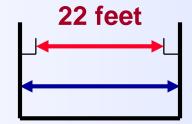

# **Hydraulic Loading - Weir Overflow Rate (WOR) Example 1.**

The flow to a circular clarifier is 690,000 gallons per day. The clarifier is 24 feet in diameter with the weirs set 1 foot from the outside wall, for a weir diameter of 22 feet. Calculate the weir overflow rate.

WOR, gal/d/ft =  $\frac{\text{Flow, gallons/day}}{\text{Length of Weir, ft}}$ 

Length of Weir,  $ft = \pi X$  Weir Diameter

 $= 3.14 \times 22 \text{ ft}$ 

= 69.08 ft

# Hydraulic Loading - Weir Overflow Rate (WOR) Example 1.

The flow to a circular clarifier is 690,000 gallons per day. The clarifier is 24 feet in diameter with the weirs set 1 foot from the outside wall, for a weir diameter of 22 feet. Calculate the weir overflow rate.

WOR, gal/d/ft = 
$$\frac{\text{Flow, gallons/day}}{\text{Length of Weir, ft}}$$

WOR, gpd/ft = 
$$\frac{690,000 \text{ gpd}}{69.08 \text{ ft}}$$

= 9,988 gpd/ft

#### Example 2.

The flow to a circular clarifier is 1.65 MGD. The clarifier is 60 feet in diameter with the weir set in 1 foot from the outside wall. Calculate the weir overflow rate.

58 feet

WOR, gal/d/ft = 
$$\frac{\text{Flow, gallons/day}}{\text{Length of Weir, ft}}$$

WOR, gpd/ft = 
$$\frac{1,650,000 \text{ gpd}}{182 \text{ ft}}$$
 = 9,066 gpd/ft

### Work Calculations on Separate Paper Answers Given on Next Slides

#### Practice 1.

The flow to a circular clarifier is 0.80 MGD. The clarifier is 30 feet in diameter with the weir set in 1 foot from the outside wall. Calculate the weir overflow rate.

#### Practice 2.

The flow to a circular clarifier is 1.4 MGD. The clarifier is 54 feet in diameter with the weir set in 1 foot from the outside wall. Calculate the weir overflow rate.

#### Practice 3.

The flow to a circular clarifier is 2.1 MGD. The clarifier is 75 feet in diameter with the weir set in 18 inches from the outside wall. Calculate the weir overflow rate.

#### Practice 1.

The flow to a circular clarifier is 0.80 MGD. The clarifier is 30 feet in diameter with the weir set in 1 foot from the outside wall. Calculate the weir overflow rate.

28 feet

WOR, gal/d/ft = 
$$\frac{\text{Flow, gallons/day}}{\text{Length of Weir, ft}}$$

WOR, gpd/ft = 
$$\frac{800,000 \text{ gpd}}{88 \text{ ft}}$$
 = 9,091 gpd/ft

#### Practice 2.

The flow to a circular clarifier is 1.4 MGD. The clarifier is 54 feet in diameter with the weir set in 1 foot from the outside wall.

Calculate the weir overflow rate.

52 feet

WOR, gal/d/ft = 
$$\frac{\text{Flow, gallons/day}}{\text{Length of Weir, ft}}$$

WOR, gpd/ft = 
$$\frac{1,400,000 \text{ gpd}}{163 \text{ ft}}$$
 = 8,589 gpd/ft

**Practice 3.** 

The flow to a circular clarifier is 2.1 MGD. The clarifier is 75 feet in diameter with the weir set in 18 inches from the outside wall. Calculate the weir overflow rate.

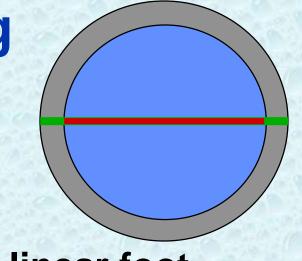

72 feet

WOR, gal/d/ft =  $\frac{\text{Flow, gallons/day}}{\text{Length of Weir, ft}}$ 

WOR, gpd/ft = 
$$\frac{2,100,000 \text{ gpd}}{226 \text{ ft}}$$
 = 9,292 gpd/ft

### **Hydraulic Loading**

**Weir Overflow Rate (WOR)** 

The flow in gallons per day per linear foot of weir

WOR, gal/d/ft = Flow, gallons/day Length of Weir, ft

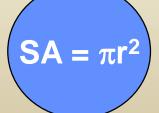

Typical Design Value = ~10,000 gal/day/ft

Solids Loading - Solids Loading Rate (SLR)

The pounds per day of solids in the clarifier influent per square foot of surface area

Same Calculations as for Hydraulic Loading

SA = L X W

Solids Loading - Solids Loading Rate (SLR)

The pounds per day of solids in the clarifier influent per square foot of surface area

"Pounds Equation"

Pounds =

Conc. x Flow (or Volume) x 8.34 Lbs/gallon

Concentration
Of STUFF
In the
Water

Quantity

Of Water

The STUFF

Is In

X Of The Water

Flow (volume) and concentration must be expressed in specific units.

Flow or volume must be expressed as millions of gallons:

$$\frac{\text{gallons}}{1,000,000 \text{ gal/MG}} = \underline{\text{MG}}$$

i.e.) A tank contains 1,125,000 gallons of water. How many million gallons are there?

$$\frac{1,125,000 \text{ gal}}{1,000,000 \text{ gal/MG}} = 1.125 \text{ MG}$$

Concentration must be expressed as parts per million parts.

Concentration usually reported as milligrams per liter.
This unit is equivalent to ppm.

When flow (volume) is expressed as MG and conc. is in ppm, the units cancel to leave only *pounds*.

Concentration x Flow (or volume) x 8.34 lbs/gallon

If the flow rate is entered in M gal per day (MG/D), the answer will be in lbs/day.

#### **Example:**

The flow to a clarifier is 1.2 MGD and the concentration of suspended solids in the flow is 2500 mg/L. How many pounds of suspended solids come into the clarifier each day?

```
Lbs/day = conc. (mg/L) x flow (MGD) x 8.34 lbs gal
```

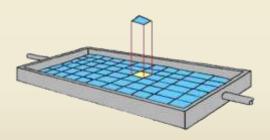

$$= 2500 \times 1.2 \times 8.34$$

= 25,020 Lbs/day

Solids Loading - Solids Loading Rate (SLR)

The pounds per day of solids in the clarifier influent per square foot of surface area

SLR, Ibs/d/ft<sup>2</sup> = 
$$\frac{\text{Solids, Ibs/day}}{\text{Surface Area, ft}^2}$$

Typical Design Value = Max 30 lbs/d/ft<sup>2</sup>

### Solids Loading - Solids Loading Rate (SLR)

#### Example 1.

Calculate the Solids Loading Rate for a clarifier with a 50 ft diameter and a depth of 12 feet, and receives a flow of 2.4 MGD with a suspended solids concentration of 1800 mg/L.

SLR, lbs/d/ft<sup>2</sup> = 
$$\frac{\text{Solids, lbs/day}}{\text{Surface Area, ft}^2}$$

Solids, lbs/day =

1800 mg/L X 2.4 MGD X 8.34 lbs/gal = 36,029 lbs/d

 $SA = 3.14 \times 25 \text{ ft } \times 25 \text{ ft} = 1962.5 \text{ ft}^2$ 

SLR, lbs/d/ft<sup>2</sup> = 
$$\frac{36,029 \text{ lbs/day}}{1962.5 \text{ ft}^2}$$
 = 18.4 lbs/d/ft<sup>2</sup>

### Solids Loading - Solids Loading Rate (SLR)

Example 2.

Calculate the Solids Loading Rate for a clarifier with a 31 ft diameter and a depth of 9 feet, and receives a flow of 750,000 gallons per day with a suspended solids concentration of 2600 mg/L.

SLR, 
$$lbs/d/ft^2 = \frac{Solids, lbs/day}{Surface Area, ft^2}$$

Solids, lbs/day =

2600 mg/L X 0.75 MGD X 8.34 lbs/gal = 16,263 lbs/d

 $SA = 3.14 \times 15.5 \text{ ft } \times 15.5 \text{ ft } = 754 \text{ ft}^2$ 

SLR, lbs/d/ft<sup>2</sup> = 
$$\frac{16,263 \text{ lbs/day}}{754 \text{ ft}^2}$$
 = 21.6 lbs/d/ft<sup>2</sup>

### Solids Loading - Solids Loading Rate (SLR)

### Work Calculations on Separate Paper Answers Given on Next Slides

#### Practice 1.

Calculate the Solids Loading Rate for a clarifier with a 12 ft width and a length of 50 feet, and receives a flow of 600,000 gallons per day with a suspended solids concentration of 3400 mg/L.

#### **Practice 2.**

Calculate the Solids Loading Rate for a clarifier with a 22 ft radius and a depth of 8.5 feet, and receives a flow of 1,450,000 gallons per day with a suspended solids concentration of 3400 mg/L.

#### Practice 3.

Calculate the Solids Loading Rate for a clarifier with a 22 ft diameter and a depth of 7 feet, and receives a flow of 0.82 MGD with a suspended solids concentration of 1950 mg/L.

### Solids Loading - Solids Loading Rate (SLR)

Practice 1.

Calculate the Solids Loading Rate for a clarifier with a 12 ft width and a length of 50 feet, and receives a flow of 600,000 gallons per day with a suspended solids concentration of 3400 mg/L.

SLR, lbs/d/ft<sup>2</sup> = 
$$\frac{\text{Solids, lbs/day}}{\text{Surface Area, ft}^2}$$

3400 mg/L X 0.6 MGD X 8.34 lbs/gal = 17,014 lbs/d

$$SA = 12 \text{ ft } X 50 \text{ ft } = 600 \text{ ft}^2$$

SLR, lbs/d/ft<sup>2</sup> = 
$$\frac{17,014 \text{ lbs/day}}{600 \text{ ft}^2}$$
 = 28.4 lbs/d/ft<sup>2</sup>

### Solids Loading - Solids Loading Rate (SLR)

Practice 2.

Calculate the Solids Loading Rate for a clarifier with a 22 ft radius and a depth of 8.5 feet, and receives a flow of 1,450,000 gallons per day with a suspended solids concentration of 3400 mg/L.

SLR, 
$$lbs/d/ft^2 = \frac{Solids, lbs/day}{Surface Area, ft^2}$$

3400 mg/L X 1.45 MGD X 8.34 lbs/gal = 41,116 lbs/d

$$SA = 3.14 \times 22 \text{ ft } \times 22 \text{ ft } = 1520 \text{ ft}^2$$

SLR, lbs/d/ft<sup>2</sup> = 
$$\frac{41,116 \text{ lbs/day}}{1520 \text{ ft}^2}$$
 = 27.1 lbs/d/ft<sup>2</sup>

### Solids Loading - Solids Loading Rate (SLR)

**Practice 3.** 

Calculate the Solids Loading Rate for a clarifier with a 22 ft diameter and a depth of 7 feet, and receives a flow of 0.82 MGD with a suspended solids concentration of 1950 mg/L.

SLR, lbs/d/ft<sup>2</sup> = 
$$\frac{\text{Solids, lbs/day}}{\text{Surface Area, ft}^2}$$

1950 mg/L X 0.82 MGD X 8.34 lbs/gal = 13,336 lbs/d

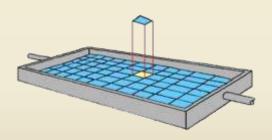

$$SA = 3.14 \times 11 \text{ ft } \times 11 \text{ ft } = 380 \text{ ft}^2$$

SLR, lbs/d/ft<sup>2</sup> = 
$$\frac{13,336 \text{ lbs/day}}{380 \text{ ft}^2}$$
 = 35.1 lbs/d/ft<sup>2</sup>

Solids Loading - Solids Loading Rate (SLR)

The pounds per day of solids in the clarifier influent per square foot of surface area

SLR, Ibs/d/ft<sup>2</sup> = 
$$\frac{\text{Solids, Ibs/day}}{\text{Surface Area, ft}^2}$$

Typical Design Value = 25 - 30 lbs/d/ft<sup>2</sup>

### **Clarifier Loading Calculations**

#### **Detention Time (DT)**

DT, hrs = 
$$\frac{\text{Tank Volume, MG X 24}}{\text{Flow into Tank, MGD}}$$

Typical Design Value = 2 – 3 Hours

### **Surface Overflow Rate (SOR)**

SOR, 
$$gpd/ft^2 = \frac{Flow, gallons/day}{Surface Area, ft^2}$$

Typical Design Value = 400 - 800 gal/d/ft<sup>2</sup>

### Weir Overflow Rate (WOR)

WOR, gal/d/ft = 
$$\frac{\text{Flow, gallons/day}}{\text{Length of Weir, ft}}$$

Typical Design Value = ~10,000 gal/d/ft

### **Solids Loading**

Typical Design Value = 25 - 30 lbs/d/ft<sup>2</sup>
